

Digital Business Banking – The Next Frontier in Digital Transformation for Banks.

Banks have been slow to digitise business banking, as products are complex and it has been driven as a bank-led engagement through relationship managers rather than a self-driven engagement by the clients. Now, though, the acceleration of customers usage of digital channels is forcing banks to adopt digital innovation to transform business banking to deliver real-time account and transaction information to relevant stakeholders in the business enabling them to make informed decisions.

Mobeix™ Digital Business Banking enables banks to manage and optimize their corporate client engagement across any device and channel. Clients have access to a comprehensive dashboard detailing their liquidity position across accounts, upcoming payments and receipts to make better informed cash management decisions. Clients can execute all their transactions through a single interface and receive real-time notifications for various banking transactions. Advanced workflows, access control rights and corporate admin facilities allow businesses to effectively manage their users.

Seamless omnichannel experience

Orchestration of multiple systems that work together to provide a unified customer experience across multiple touch points

Enhanced usability

The admin function provides an optimal way to onboard corporates, register billers, maintain reference data, and view real-time accounts & companies all at one place

Information on-the-go

Corporates get access to the liquidity positions, real-time transaction status & instant alerts on any device any time

End-to-end security

Highest level of security for transactions is ensured using a digital signature. Secure remote access is provided via 2FA with push notification for real-time updates

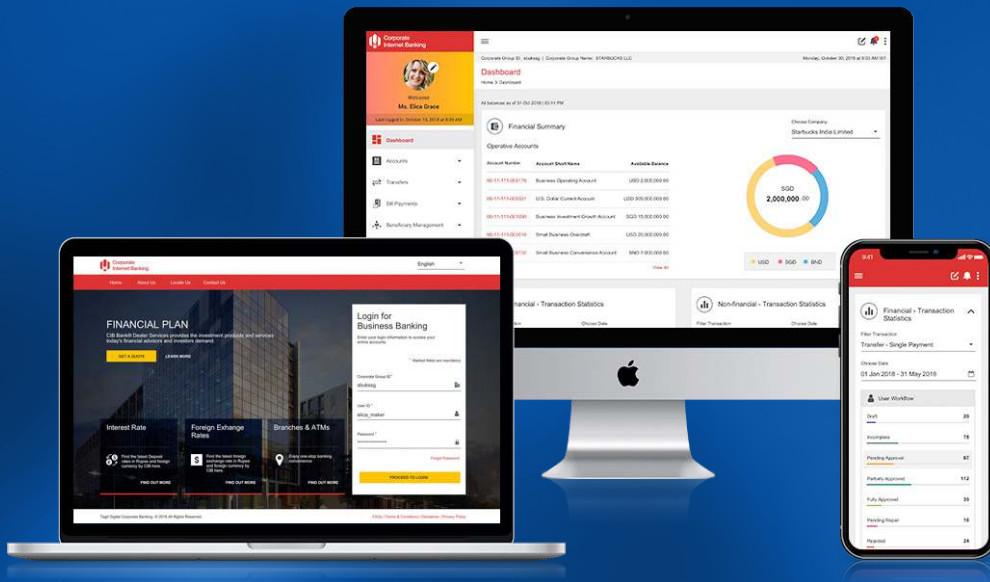

Identity & access management

Easy to set up and manage user roles reflecting the organization structure. Ability to grant granular access control at transaction and information field level

Flexible technology stack and integration capabilities

Banks can integrate to both their backend banking systems as well as the clients' ERP and business systems to provide real-time access and straight through processing of transactions

Mobeix™ Digital Business Banking Services
